

Remove Poutès dam (France) to make Loire Allier Salmon Restoration Plan work

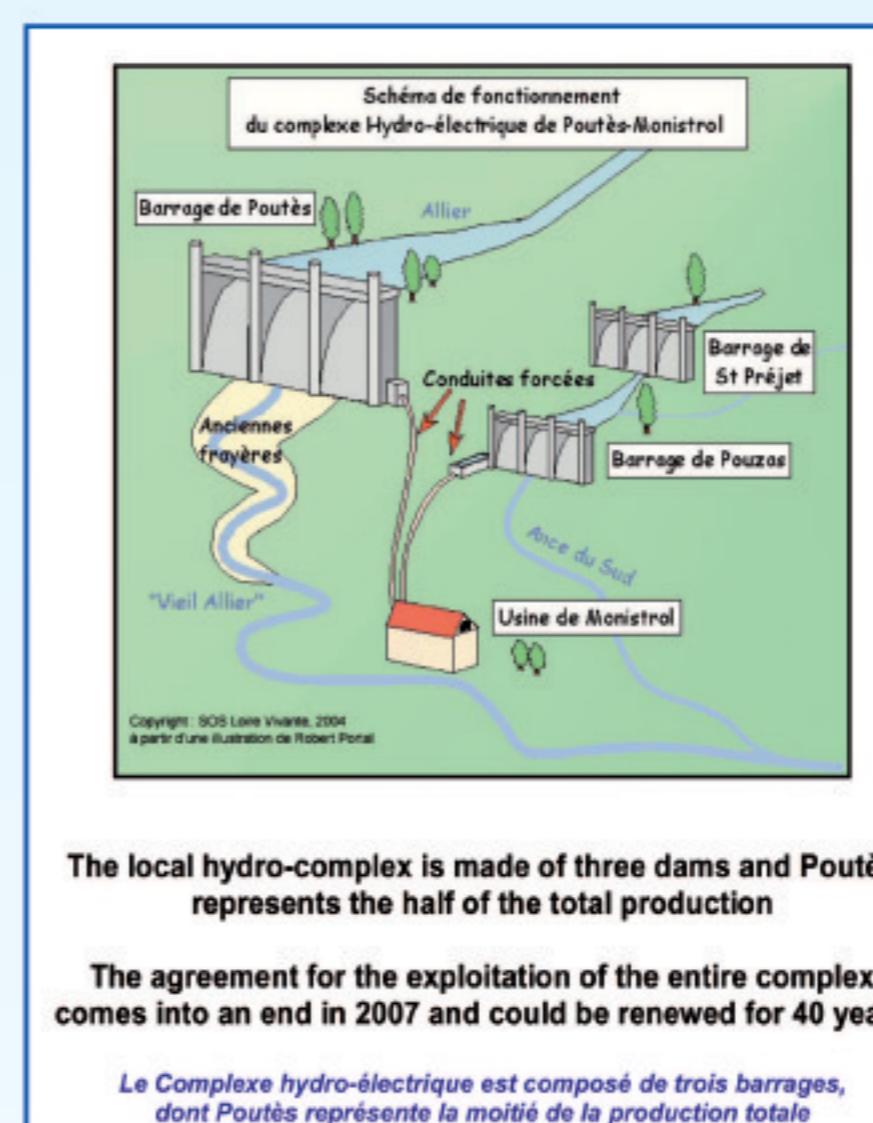

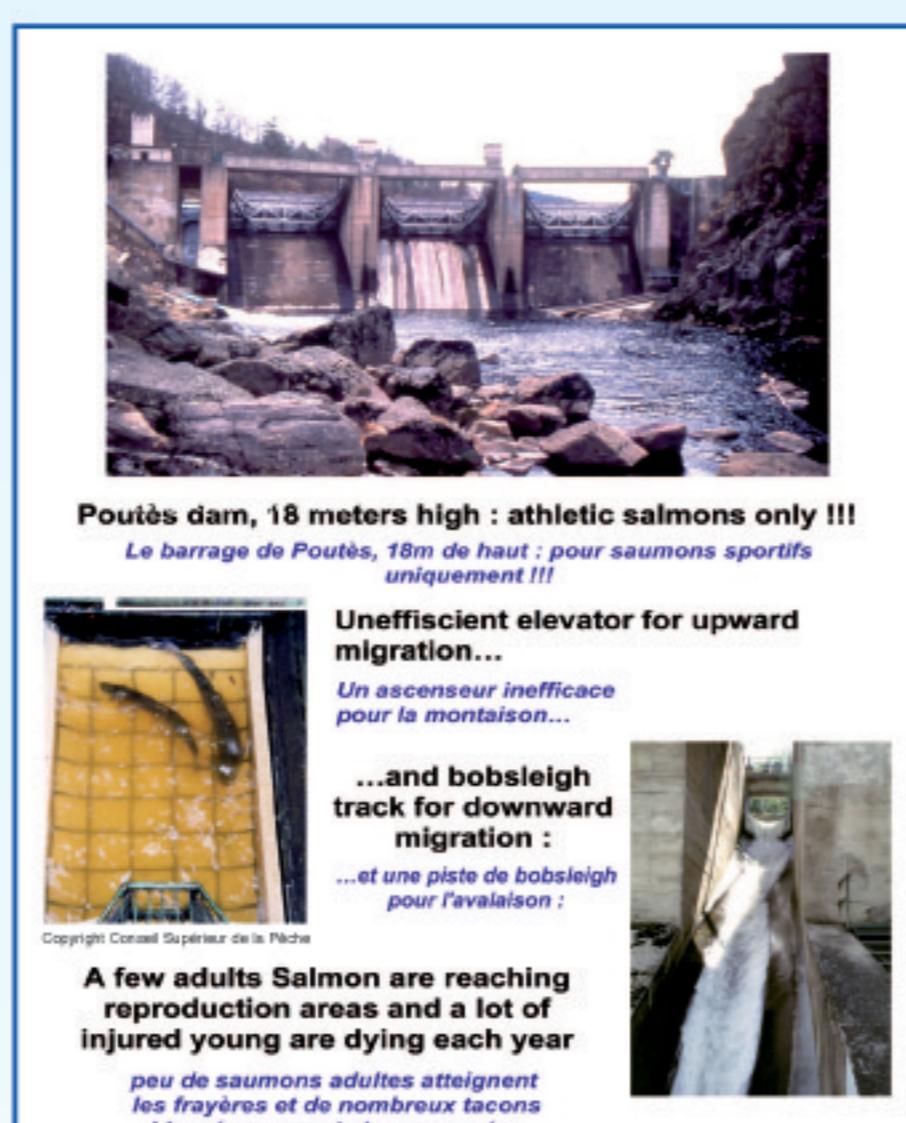

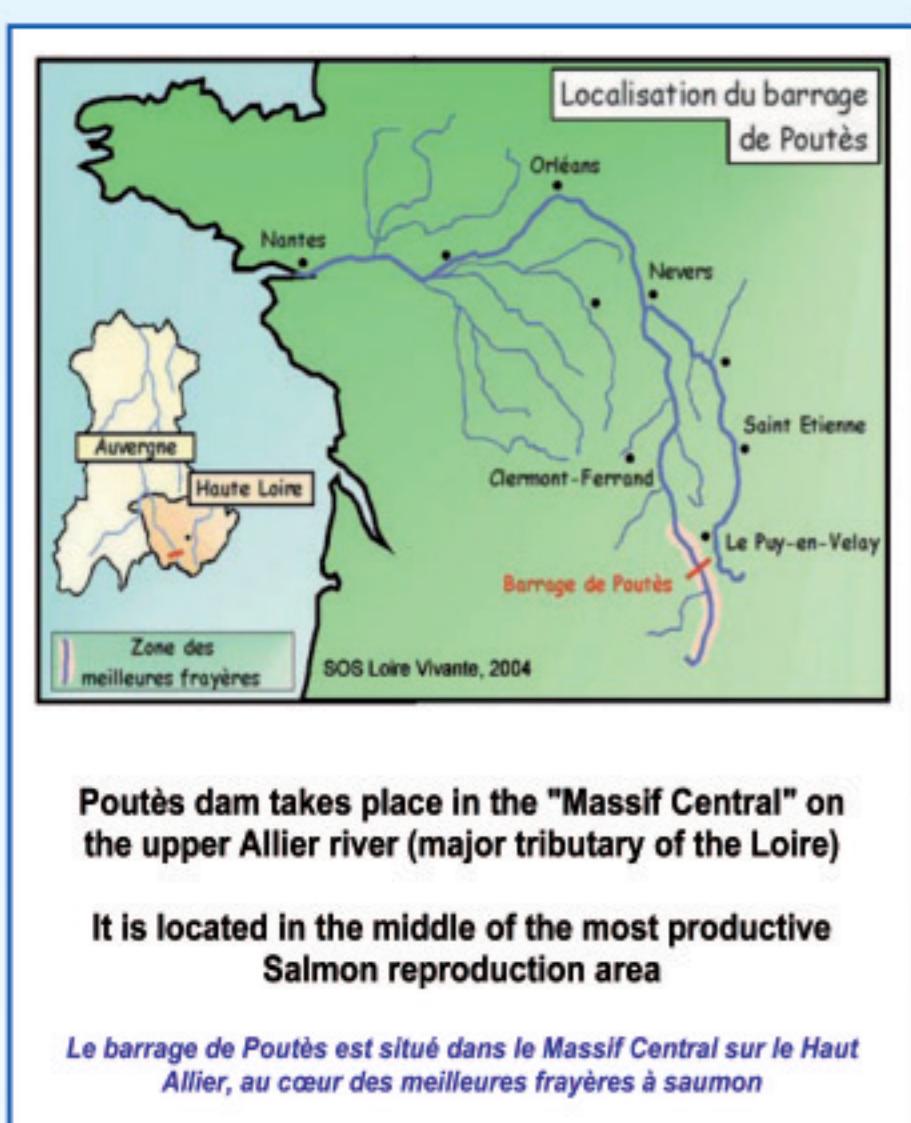

Démanteler le barrage de Poutès pour que le Plan de Restauration du Saumon Loire Allier soit un succès

3 dams removed...

3 barrages démantelés...

...one left to remove : Poutès dam, the last major obstacle
...dernier obstacle majeur, le barrage de Poutès doit également être démantelé

Our proposal :

Dismantle the only dam of the hydro-complex (Poutès) that threatens the Salmon ; Adapt equipment and management of the two other dams of the tributary and transfer property to the local collectivities in order to let them produce "Green labelled" electricity by themselves ; Invest created benefits into sustainable Salmon angling tourism and renewable energies in the valley (wind, solar, wood...) ; Those measures could compensate for the loss of electricity production and taxes for local collectivities and achieve successful Salmon restoration.

Nos propositions :

Dismantle the only dam of the hydro-complex which represents a real barrier for the salmon : Poutès ; Adapt the equipment and the management of the two other dams on the tributary and transfer the property to the local collectivities in order to let them produce "green labelled" electricity ; Invest the created benefits into sustainable salmon angling tourism and renewable energies in the valley (wind, solar, wood...) ; Those measures could compensate for the loss of electricity production and taxes for local collectivities and achieve successful salmon restoration.

To save the Salmon : let's remove Poutès dam !
Sauvons le saumon : démantelons le barrage de Poutès !
